

Why Buy A Marlin Camper

Why Buy a Marlin Camper?

Marlin Campers prides itself on providing an affordable camper trailer which retains all of the important quality features for when you are choosing your very own camper trailer. There are many different areas which are important to consider, and below we will outline the areas that allow our campers to stand out from the rest.

Canvas: Marlin Campers has a long and strong relationship with Oztrail, an Australian company based in Brisbane, which enables us to provide our customers with a product of outstanding quality. Oztrail has many decades of experience in working with canvas, as their large range of swags, cabin tents and touring tents can demonstrate. They bring their vast knowledge in canvas manufacturing to the range of camper trailers, and it is this experience which underpins the 2 year manufacturer's warranty provided with all of our camper trailers. The **600gsm (or 15oz)** Satproof canvas used in the Marlin Camper Trailers is industry leading. The canvas is waterproofed through a **hot impregnation** technique that bonds the water proofing agent to the material. This ensures that the material's **water proofing is highly durable**, and unlike some aftermarket or external water proofing techniques, the canvas' water proofing cannot wear off. This is particularly important as constantly opening and closing the camper trailer over a lifetime can wear some inferior waxes or treatments. The canvas we use on the roof of our camper trailers has been further improved. To darken the material, the **roof canvas is double dyed**. This darkening helps to keep the camper cooler in summer. The **outer layer** of canvas incorporates a **silver thread**, which assists in reflecting the heat from the sun, again keeping your Marlin Camper cooler and more comfortable. Both of these techniques are unique to Oztrail. The final word on the canvas is relating to the stitching. Not only are all of the seams double stitched, the main seams are also **folded together**, giving a **four layered strength**, and ensuring your **seams stay dry**. This is yet another unique feature to Oztrail camper trailers, and quality you won't see in other camper trailer tents, including the more expensive brands.

Awning Walls: Our entire Marlin Camper range can be fitted with a set of canvas walls which will **double** the internal space of your camper trailer. For ease of use and practicality, our walls come in **four sections**, which simply join together with durable Velcro trips. There are two main benefits. Firstly, not having to erect a single heavy wall means that you can put up the awning walls **simply and comfortably**. Secondly, you are afforded more **flexibility** in your setup. On a quick trip you may only need to setup **one wall** for a little wind protection, or you may want two walls for privacy. **The choice is up to you**. Marlin Campers provides two flooring options for the awning. You can install a full PVC floor which is made from the same heavy duty as the main floor of the tent, or you can opt for a **mesh floor**. We recommend the mesh as it again provides flexibility and many caravan park **require** a mesh awning floor these days, it ensures you will not kill the grass. Secondly, the mesh allows any dirt, sand etc to filter through to the ground so that **you do not have to continually clean this high traffic** area. If you choose to use just one of the available walls, you **can peg directly through** the mesh without damaging it while maintaining a **solid base** to protect from wind. Finally, the floors we recommend (Camec annex flooring) is UV stabilised and **warranted for ten years!**

Windows: Throughout the Camper trailer's main body and awning walls, we use a **super fine midgy screen** to keep out all of the nasties. This midgy screen is a super fine **material** screen, not a plastic flyscreen! Being material gives the screen a much longer serviceable life, as they **resist cracking and perishing**. They also give you a practical option to repair them with a simple needle and thread should the need ever arise. The super fine screen also provides **protection from high winds** by cutting down a lot of strong air flow. The very nature of the screens reduces the movement of high speed air, meaning that you can be comfortable inside your camper with the windows open on even the most blustery days. To provide protection from the elements, all of the windows on the camper have **dual canvas flaps**, both internal and external. The internal flaps will allow you to secure your privacy, or to close the windows from **inside the camper** should bad weather set in. The external flaps can roll up to give **maximum air flow and comfort**, or you can take advantage of the **reinforced eyelets** in each corner to permit you to use poles to erect the shades, or peg out each of the widows to protect from the sun, or provide additional protection from rain.

Access: If bad weather sets in, access can be gained into the main storage of the camper via an **access hatch underneath the mattress** (all of our campers are **provided with their own** customised high density open cell foam mattress, designed for camping conditions). On our Escape and Explorer range, this hatch is supported by a gas strut. The strut allows you to support the mattress

and your bedding without having to hold the hatch open yourself, giving you two hands to utilise the ample storage room. Two heavy duty 800N gas struts support the main base of the camper, and this allows you to **access the campers' storage from outside the camper**. The strength of the struts will hold open the camper even when the camper is completely folded down. Also, the unique design of our campers allows you to utilise the gas struts when the camper is fully setup as well. For the longevity and strength of your camper, we do not use a simple piano hinge, but weld fully rated hinges in support of our gas strut system.

Frame Work: The framework of our camper trailers is designed around a unique hinging system. This system has many benefits, but it's primary feature is that it allows an **individual** to fully setup, or dismantle, any of our camper trailers **single handed**. In combination with our gas strut and hinging system, we believe we have the **simplest camper trailer to erect on the market**. In conjunction with our heavy duty hinges, we use only the best poles and framework. Using a thicker, galvanised framework, gives our campers **extra strength**. This provides durability, and strength, particularly in **high winds**. Not only are our poles and framework thicker than our competitors, but we also can provide full replacement parts should you misplace any of your equipment. You won't be left stranded with a camper you cannot use, simply because there are no replacements, or after sales accessories and components available!

Warranty: The longest in the Camper Trailer business. We offer a full **two year manufacturers'** warranty. We believe this is the best indication of the **quality** of our camper trailers. Some providers of cheap, poor quality campers actually specify no warranty at all! Ensure that you clarify what sort of warranty and after sales support you can expect when making an investment in your camper trailer. When you buy from Marlin Campers, you can deal directly with the owners, so you can be assured we have your interests in the fore front of our minds.
